

FIVE POWERFUL PROGRAMS FOR EVERY REAL ESTATE APPRAISER

The right tools are critical to keeping an appraisal business up and running efficiently. Here are five programs that deliver significant functionality to an appraiser's daily practice. These programs can secure and shrink files, clean your OS to keep your system running efficiently, and save you from horrible mistakes when files are accidentally deleted. They can also manage password access to your OS and programs, and provide you with a sophisticated real-time backup of all of your important programs and data. Any one of these five programs are a problem solver on a multitude of levels, and together they help to fill your tool box with the five solutions that will help keep your computer up and running efficiently every day.

ZIP ARCHIVER

[ZIP Archiver](#) is a powerful and modern archival program that allows users to easily compress and open files from any archive. Users can use cloud technologies to conveniently create copies of important files, quickly send reports to their clients, or share data with colleagues.

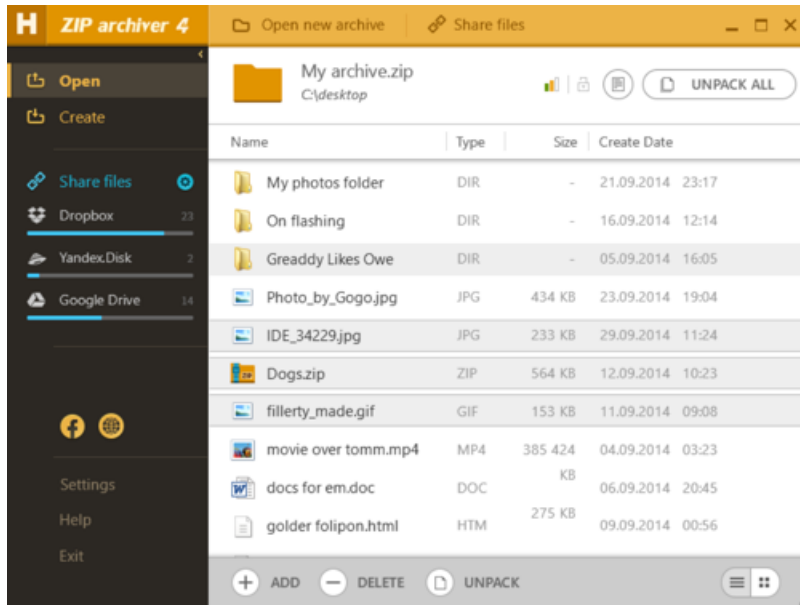

Figure 1: Zip Archiver

CCLEANER

[CCleaner](#) may be the most popular system maintenance tool ever.

Is your computer running slow? As it gets older it collects unused files and settings which take up hard drive space making it slower and slower. CCleaner cleans up these files and remedies this problem in seconds.

Advertisers and websites track your behavior online with cookies that are placed on your computer. CCleaner erases your browser search history and cookies so any Internet browsing you do stays confidential and your identity remains anonymous.

Over time your registry can become cluttered with errors and broken settings which can lead to system crashes. CCleaner's registry cleaner clears out this clutter to make your PC more stable.

Many programs run silently in the background when you start up your computer. CCleaner helps you get to work or play faster by letting you disable unneeded programs.

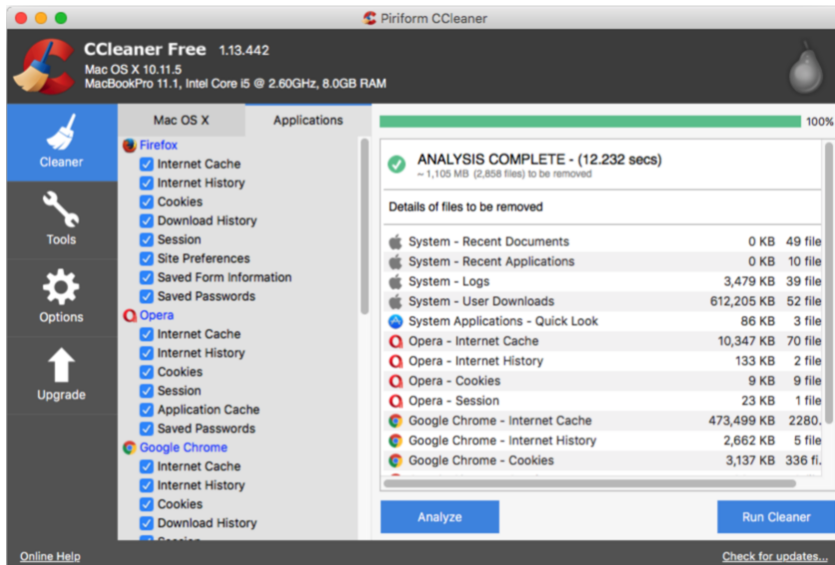

Figure 2: CCleaner

DISK DRILL

If you have ever accidentally deleted a file that you really needed, try [Disk Drill](#) to recover lost or deleted files.

When a file or folder is deleted on major file systems it's only the filename that gets affected by this action. In the most primitive case, it loses its first character, and the disk space where that file resided is marked as available for new data.

This ensures the fastest deletion possible. It also results in the disk sectors still storing the deleted data. This permits Disk Drill to recover the file.

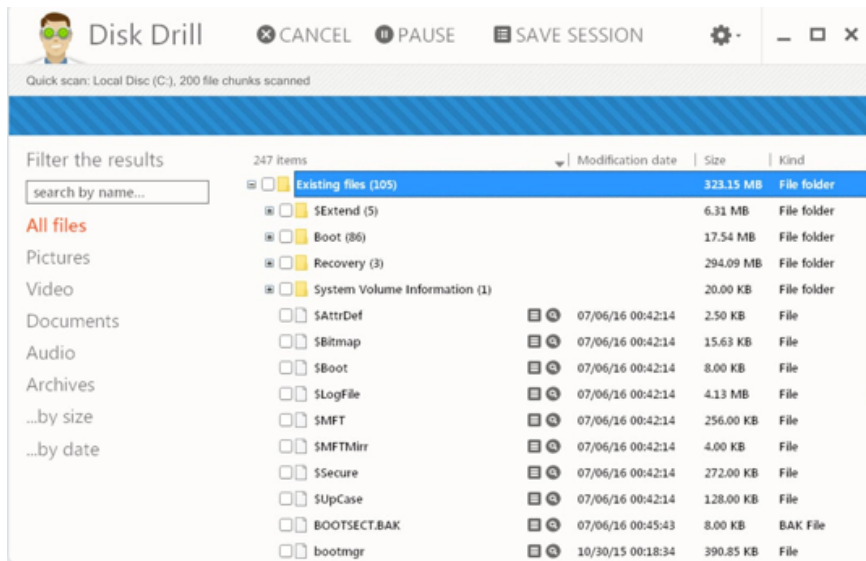

Figure 3: Disk Drill

DASHLANE

If you have ever thought about using a free password manager, try [Dashlane](#). No more typing passwords and filling out tedious online forms. Automatically and easily save and later recall your passwords, personal information, and payment details. Dashlane will become your favorite everyday tool.

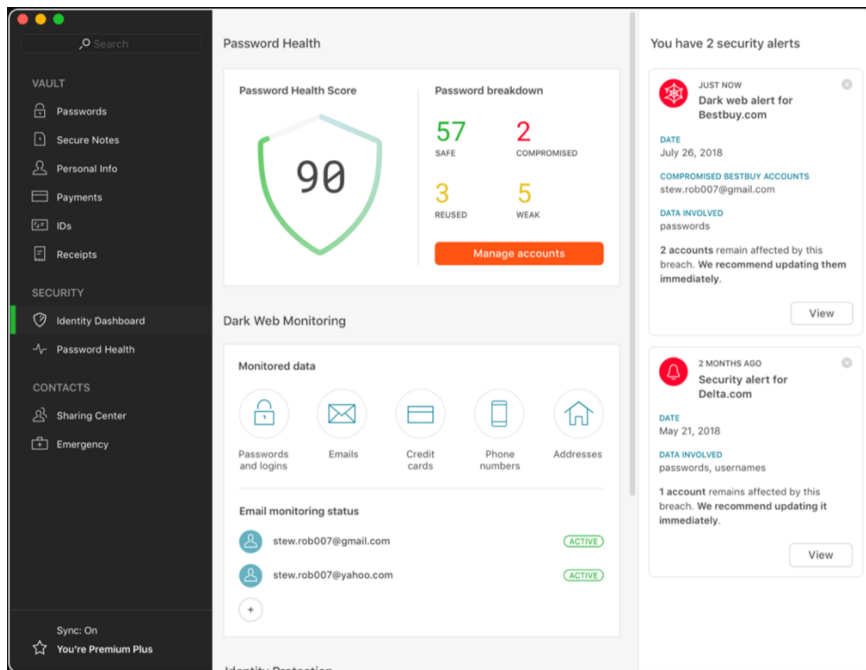

Figure 4: Dashlane

GOOGLE BACKUP AND SYNC

If you just want to backup your programs and data and not image your entire hard drive, you can use [Google Backup and Sync](#) to backup your files and folders to your Google Drive storage.

But Google Drive is much more than just a cloud-based storage and syncing service with a free storage plan. With Google Drive's apps you create, edit, store, and collaborate on documents. New utilities for the service lets consumers specify any folder on the computer for backup and let businesses save space by not duplicating files on local storage.

New paid plans under the Google One brand make storage upgrades more affordable than most of their competitors. Google Drive can help you store, back up, create, and even edit files, whether you work solo or as part of a team.

The Google Drive team continues to set the standard in collaborative software tools as part of their sync service that will keep every version of every file you save.

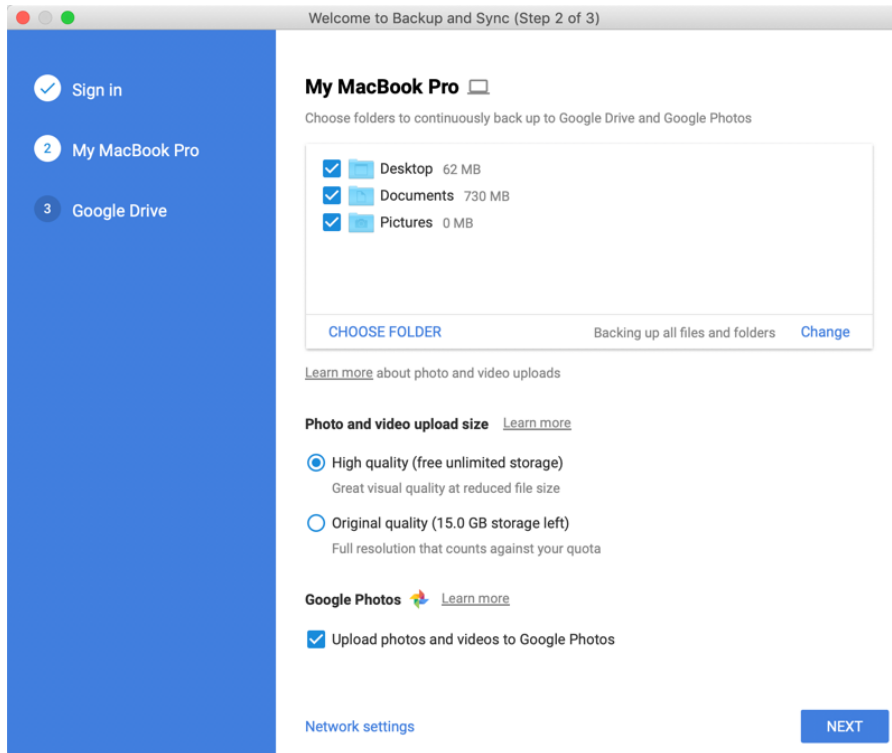

Figure 5: Google Backup and Sync

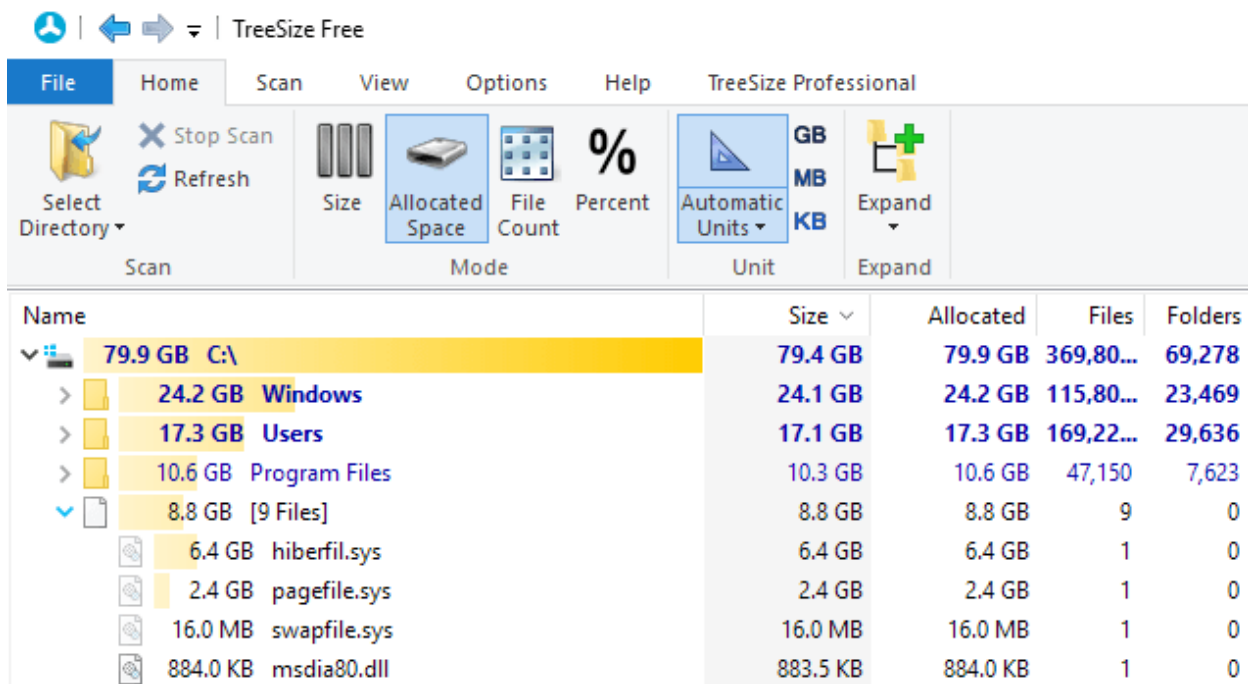

CONCLUSION

Collectively, these tools can save time, cure computer ills, undelete files, and enhance your productive capacity.

STOPPED HERE

21. Whether you know it or not, you probably have a bunch of duplicate files on your computer! It just happens. You can use Duplicate Cleaner to [find and remove those duplicate files](#).

22. If you want to save more hard drive space, you should look into a program that will analyze hard disk space usage, like [TreeSize](#). Other programs include [Space Sniffer](#) and [WinDirStat](#).

The screenshot shows the TreeSize Free application interface. The top menu bar includes File, Home, Scan, View, Options, and Help. The main toolbar contains icons for Stop Scan, Refresh, Select Directory, Size, Allocated Space, File Count, Percent, Automatic Units, and Expand. The main display area shows a tree view of the C:\ drive with the following data:

Name	Size	Allocated	Files	Folders
79.9 GB C:\	79.4 GB	79.9 GB	369,80...	69,278
> 24.2 GB Windows	24.1 GB	24.2 GB	115,80...	23,469
> 17.3 GB Users	17.1 GB	17.3 GB	169,22...	29,636
> 10.6 GB Program Files	10.3 GB	10.6 GB	47,150	7,623
▼ 8.8 GB [9 Files]	8.8 GB	8.8 GB	9	0
6.4 GB hiberfil.sys	6.4 GB	6.4 GB	1	0
2.4 GB pagefile.sys	2.4 GB	2.4 GB	1	0
16.0 MB swapfile.sys	16.0 MB	16.0 MB	1	0
884.0 KB msdia80.dll	883.5 KB	884.0 KB	1	0

23. Want to see every possible program or driver that loads when Windows starts? Check out [Autoruns](#), which is a free tool from Microsoft.

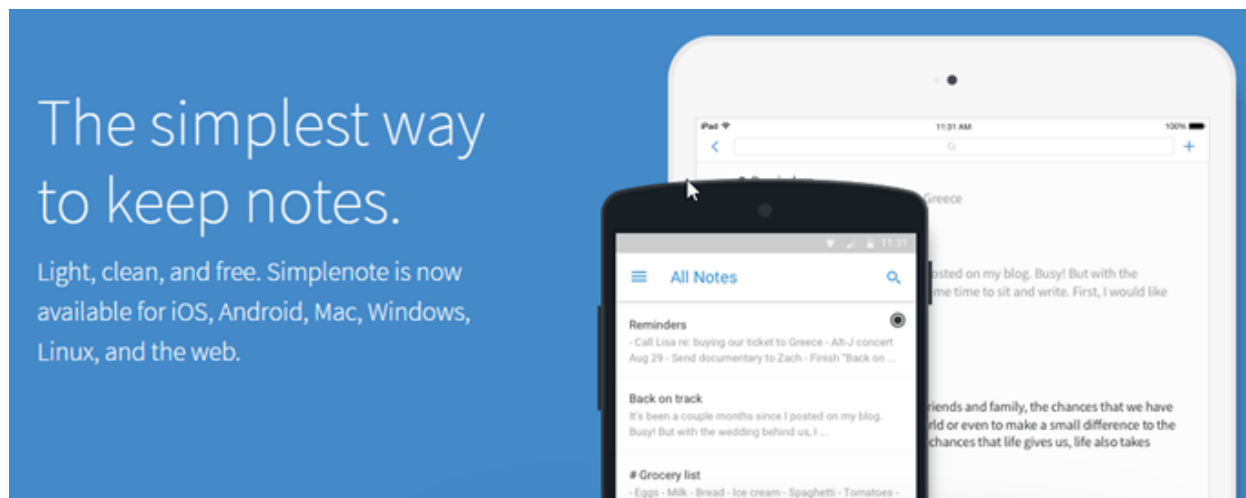

24. Been looking for a good free photo editor lately? Check out [GIMP](#), [PhotoScape](#), [Paint.NET](#), or [Fotor](#)! If you prefer an online photo editor, checkout [Pixlr](#) and [BeFunky](#).

25. Looking for detailed information about the hardware on your computer. Look no further than [HWINFO](#). It can also analyze and monitor your system too.

26. If you're not running Windows 10 or don't like their default Mail app, you can check out [Mozilla Thunderbird](#), which is still updated regularly.

27. Ever had to send a large file to someone, but your email client wouldn't allow more than 10 to 20 MBs? You can share large files (up to 2GB for free) with friends and family using a program called [WeTransfer](#). Other programs include [DropSend](#) and [pCloud](#).

28. The popular notes app we all know is Evernote, but there are other great options like [SimpleNote](#), [Google Keep](#), and [Notebook](#).

29. If you have an FTP server or a website, you will probably need a good FTP client program like [WinSCP](#), the most popular these days. Other good options include [FileZilla](#) and [CyberDuck](#).

30. If you're paranoid about your data, you might want to encrypt it with a program like [VeraCrypt](#) or [AxCrypt](#).

31. Are you a web developer or coder? Looking for a good HTML editor? There are quite a few: [CoffeeCup](#), [Visual Studio Express](#), [Atom](#), [Sublime Text](#), etc.

32. Want to learn more about the WiFi networks around you? Download [WiFi Inspector](#) or [Acrylic WiFi Analyzer](#).

33. Ever wanted to create a family tree? [Legacy 9.0](#) is a free genealogy tool that you can use to keep track of family and relatives. Another good app is [ScionPC](#).

34. If you constantly use the same programs over and over, it might be a good idea to download a quick program launcher. One of my favorites is [Find and Run Robot](#).

35. OpenOffice is the most popular free Office suite, but there are other good ones like [LibreOffice](#) and [WPS Office Free](#).

36. Ever wanted to automate a certain task in Windows? Maybe you want to have your computer turn off every day at 10pm? Or certain keystrokes you want to record and repeat over and over again? Whatever the case, [AutoHotKey](#) is an awesome program for automating many tasks in Windows.

37. I mentioned HWiNFO in #25, but if you want detailed info about your CPU and about the motherboard, then [CPU-Z](#) is a better option.

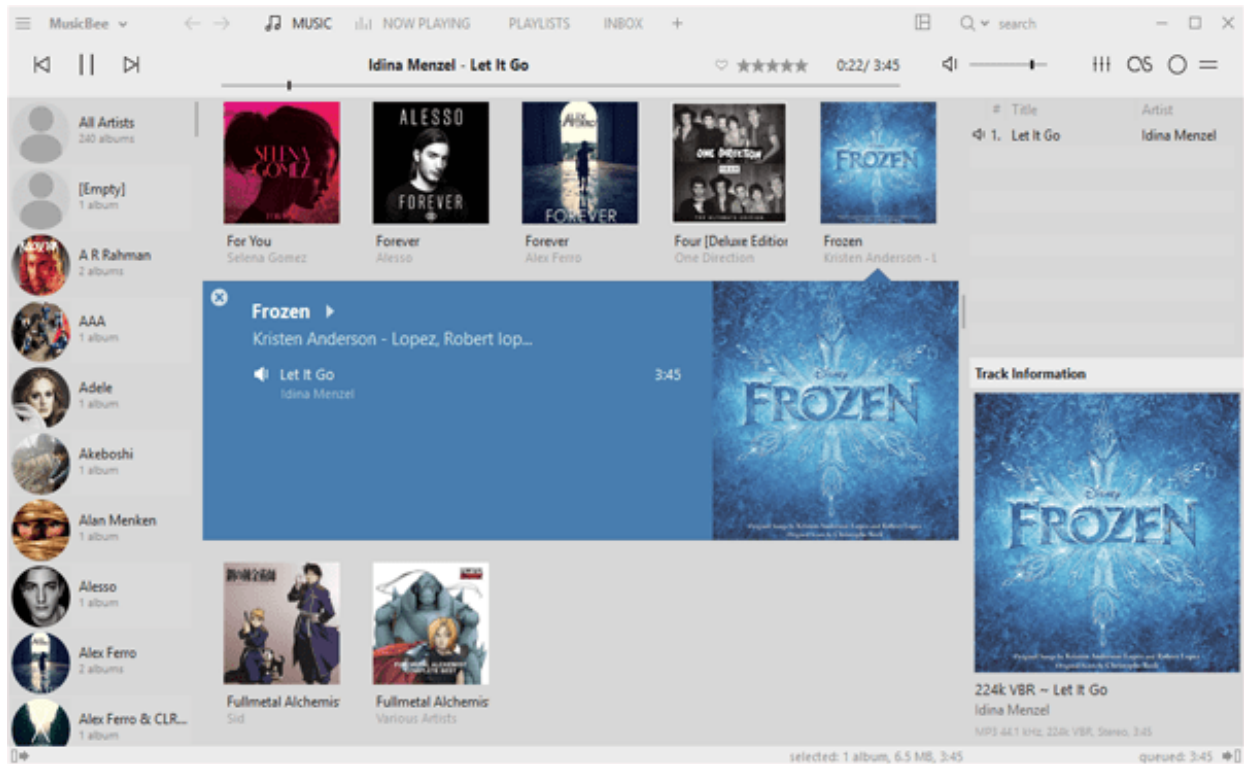

38. If you're planning to overclock your CPU, then you should download [Prime95](#) to make sure your system is stable. If you're overclocking a GPU, check out [MSI Afterburner](#).

39. Looking to secure your browsing traffic with a VPN? The best free VPN currently is [TunnelBear](#), which restricts you to 500 MB of bandwidth.

40. In #14, I mentioned two professional and free movie-editing programs, but they are quite complex. If you're looking to create movies without such a learning curve, check out [Shotcut](#), [VSDC Free Video editor](#), and [Avidemux](#).

41. Got kids? Need some parental control software? The best options are [Qustodio](#) and [Kidlogger](#). Free versions are limited obviously. Also, read my post on the different ways to [childproof a computer](#).

42. If you have a lot of music, you might want to consider a music management program like [Media Monkey](#). Another good program is [MusicBee](#).

43. I talked about a VPN for secure browsing in #39, but you can also use a different browser like [Tor](#) to hide your identify.

44. If you've recently bought a new computer, you can use a program called [PC Decrapifier](#) to get rid of all those useless programs that can come bundled with the PC and slow everything down.

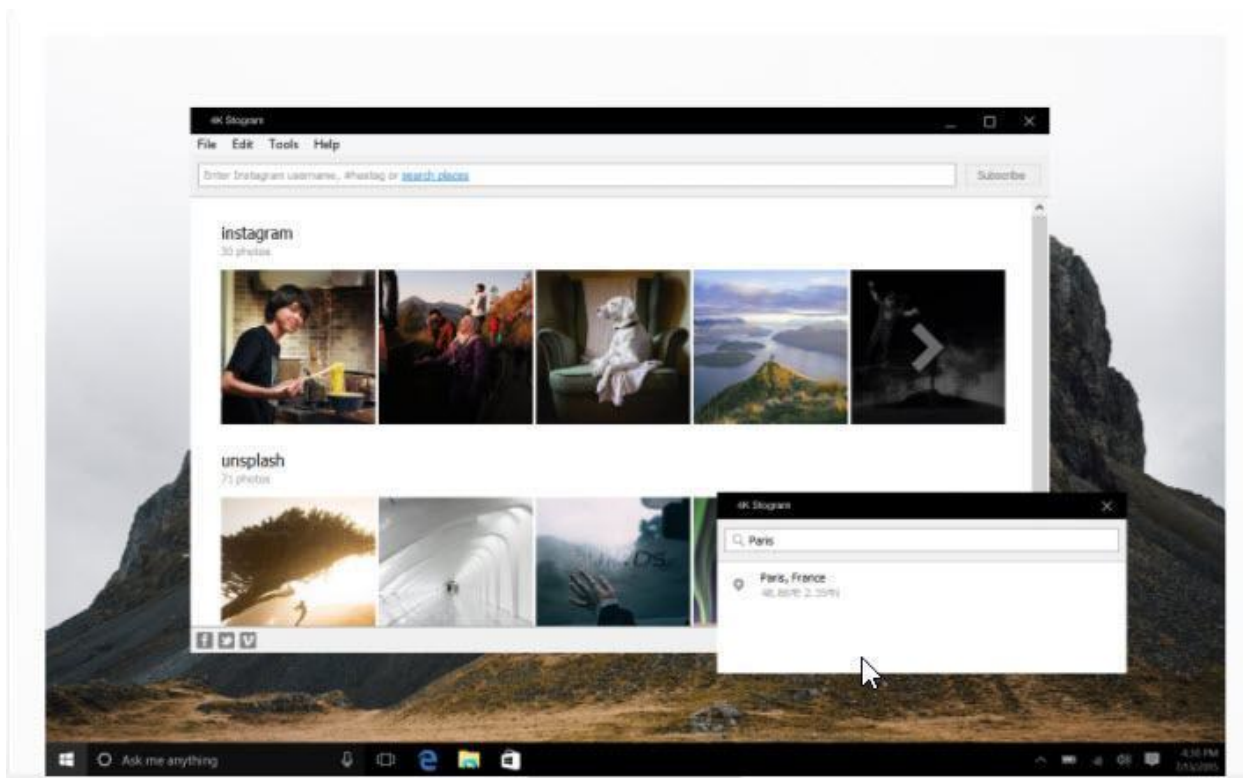

45. After you have a computer for a while, there are always going to be programs that you don't use anymore and that can be uninstalled. [Revo Uninstaller](#) will get rid of any program whether it wants to or not.

46. If you want to play some free games that aren't Solitaire, download [Steam](#). They have a whole free games section.

47. If you have sensitive data on your computer that you want to permanently and securely delete from your hard drive, I would suggest using a program called [dBan](#).

48. Do a lot of reading? A great app for reading in Windows is the [Kindle](#) app. It will also sync down to your phone or tablet too.

49. Love using Instagram? Want to download a photo, video or story from Instagram? Check out [4K Stogram](#).

50. Looking for good screen capture software? A really good one is [Screenshot Captor](#). Of course, Windows has a lot of built-in ways to [capture screenshots](#) too.

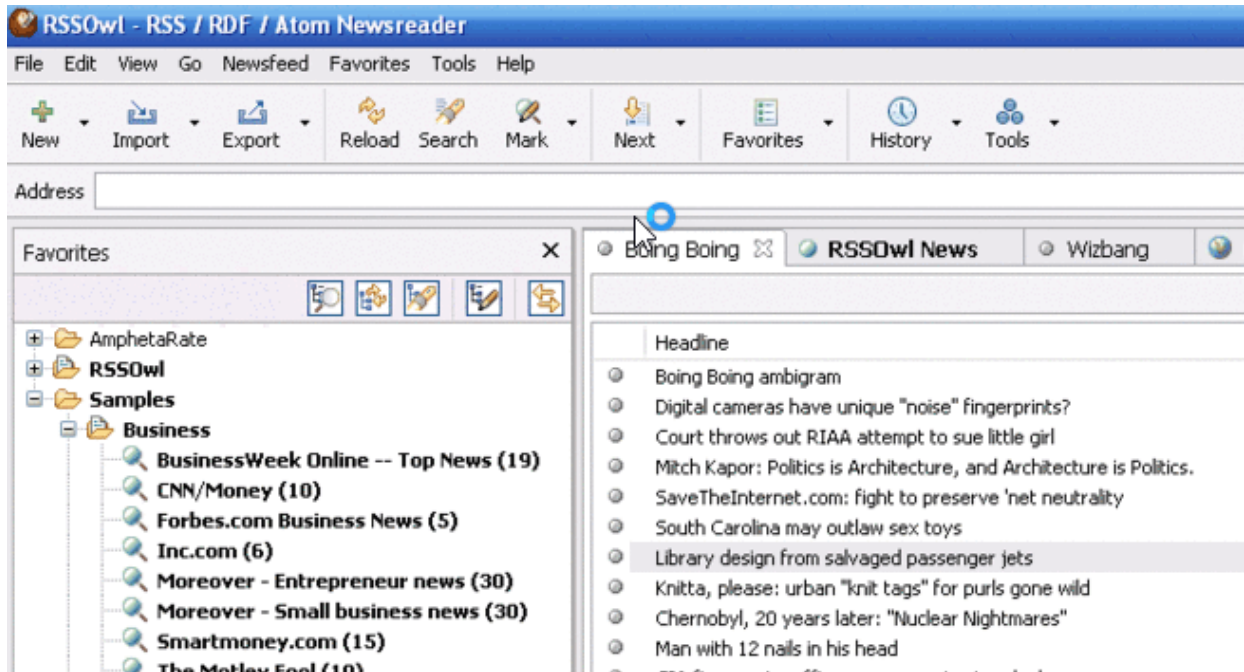

51. We've all heard of Skype and WhatsApp, but what about [Viber](#)? It's another tool you can use to communicate with family and friends worldwide.

52. Ever wanted your computer to speak out what you have written? It's called text-to-speech and there are a couple of good programs that do it: [Balabolka](#), [NaturalReader](#), and [Panopreter](#).

53. Do you have a lot of programs that load when Windows starts? Does it take several minutes for your computer to become useable? If so, check out [Startup Delayer](#), a program that delays the startup of programs so that your computer loads faster.

54. Do you need to create a presentation, but don't have PowerPoint? In addition to the Office suites we mentioned in #35, you can also use [Canva](#) and [Prezi](#).

55. Follow a lot of blogs online and still miss Google Reader? [RSSOwl](#) is a good alternative.

56. You've all probably heard of TeamViewer for remotely sharing your desktop, but you can also use [Join.me](#).

57. Are you someone who prefers a supercharged Explorer interface? If so, check out [Total Commander](#), which has been around for decades and works with Windows 10.

58. If you think you might have bad memory installed in your computer, you can [check for bad memory using memtest86](#).

59. Want to record your screen and live stream it too? [OBS Studio](#) is a free app that does just that. [TinyTake](#) is another decent one, though the free version is limited.

60. Are you a professional photographer that needs tools like Lightroom, but don't want to pay for a subscription? [Darktable](#) is an open-source photography workflow application.

61. Speaking of Adobe, are there any good Adobe Illustrator alternatives? Yes! One good one for working with vector graphics is [Inkscape](#). Another good one is [Vectr](#).

62. Are you someone who needs to write something, but gets distracted easily? Check out [FocusWriter](#) and write without distractions.

FocusWriter is a simple, distraction-free word processor. It utilizes a hide-away interface that you access by moving your mouse to the edges of the screen, allowing the program to have a familiar look and feel to it while still getting out of the way so that you can immerse yourself in your work.

FocusWriter allows you to customize your environment by creating themes that control the font, colors, and background image to add ambiance. It also features on-the-fly updating statistics, daily goals, multiple open documents, spell-checking, and much more.

Additionally, when you open the program your current work in progress will automatically load and position you where you last left off so that you can immediately jump back in.

63. One of the worst things that can happen to your computer is for it to become infected with Spyware. [HijackThis](#) is an awesome program that you can use to find and remove spyware. However, it's no longer active. Another good option is [AdwCleaner](#).

64. On the topic of spyware, there are several other freeware programs like [SUPERAntiSpyware](#), [adaware](#), and [SpyBot](#).

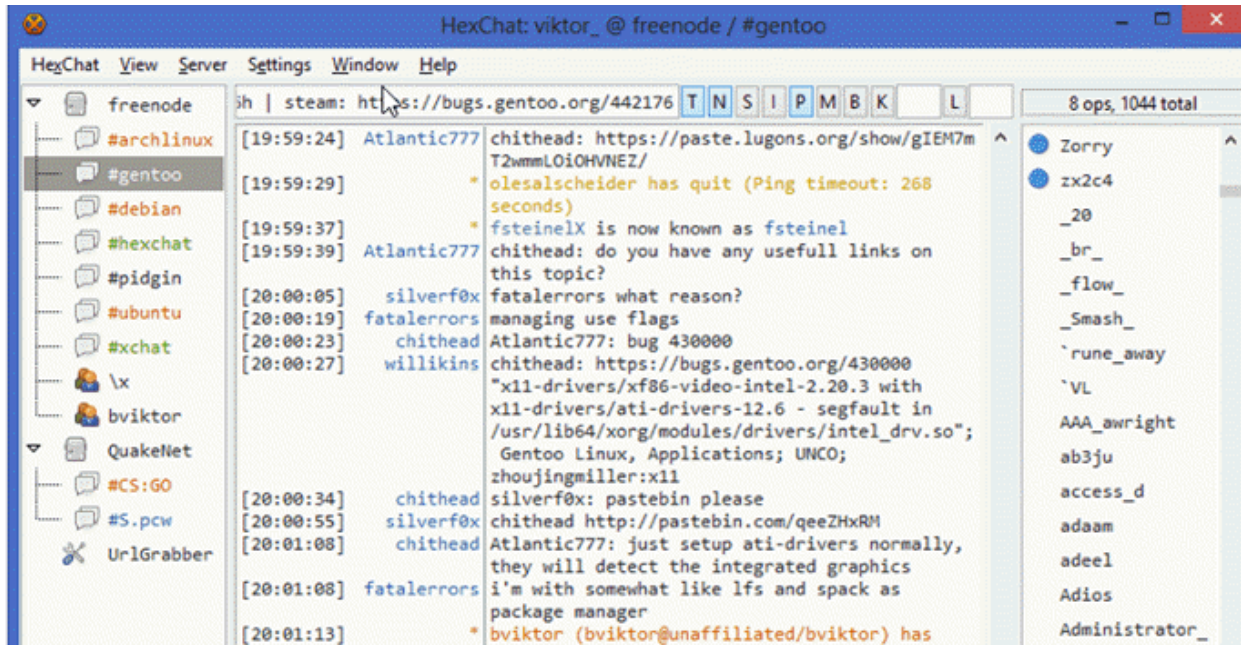

65. In addition to spyware and malware, there are also separate tools you can use to find rootkits like [TDSSKiller](#), [Sophos Rootkit scanner](#) and [Malwarebytes Anti-Rootkit](#).

66. Finally, if you're not able to detect a virus while in Windows, a good idea is to run an offline virus scan. One good option is [Windows Defender Offline](#).

67. If you ever need a free CD/DVD/Blu-ray disc burning program, check out [CDBurnerXP](#). It also has a portable version you can run off your USB stick. Another good one is [AVS Free Disc Creator](#).

68. If you ever need to [burn an ISO image to a CD or DVD](#), then you should use a free program like ImgBurn.

69. Are you a true nerd and still use IRC? If so, [HexChat](#) is an excellent IRC client.

70. Ever run into the problem where you are trying to delete a file in Windows and it says that the file is in use and cannot be deleted? You can use [Unlocker](#) to delete any file that is locked by a process.

71. Are you always thinking about stuff? Then you should probably use some free [mind-mapping software](#). [Wikipedia](#) also has a big list of mind-mapping software.

72. Need to manage a small project, but need some project management software? Check out [GnattProject](#) and [Taiga.io](#).

73. If you want to play around with virtual machines, download the free and excellent [VirtualBox](#) from Oracle. It's the safest way to browse and test new software.

74. In #19 and #20, I talked about software to backup your computer, but forgot to mention [Drivelmage XML](#), a good program you can use to create an image of your hard drive. Other good disk imaging tools include [MacriumReflect](#) and [Clonezilla](#).

75. Need some accounting & finance software, but don't trust the online tools like Mint and Quickbooks? [GNUCash](#) is free accounting and finance software.

76. Ever head of [Blender](#)? It's a pretty amazing program and it's free. It lets you create 3D worlds, 3D animations and 3D games. Check it out.

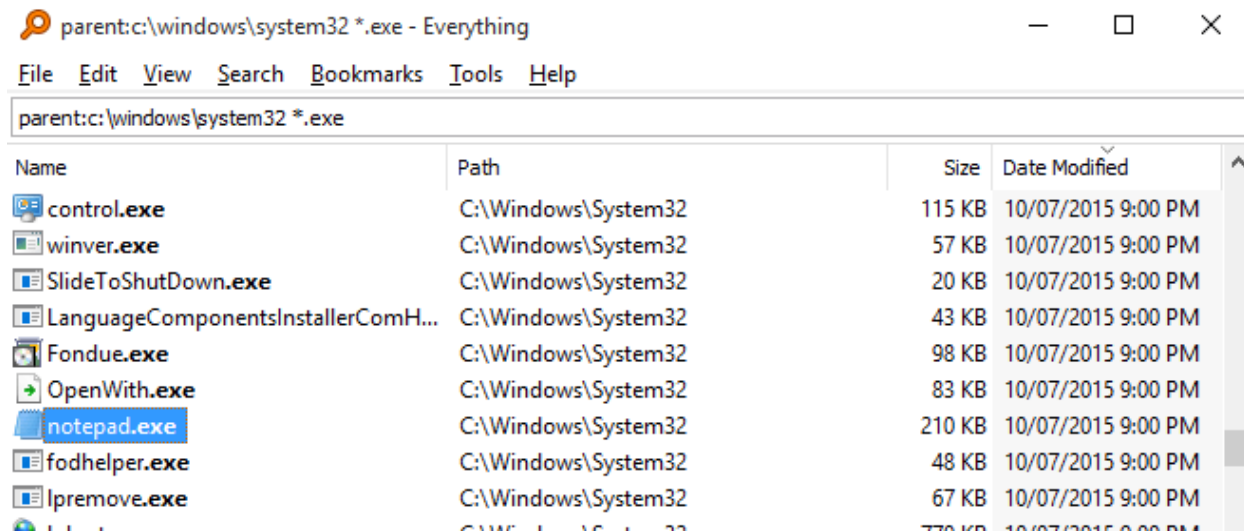

77. If Blender is too complex for you, another great option for sketching in 3D is [SketchUp](#).

78. While we're on the topic, [FreeCAD](#) is open-source parametric 3D CAD modeler.

79. For space lovers, I always recommend [Stellarium](#), which is basically a planetarium for your computer.

80. Looking for a really good partition manager? Check out [GParted](#), probably the best not-heard-of partition manager out there. Other good options include [MiniTool Partition Wizard](#) and [EaseUs Partition Master Free](#).

81. Looking for a file on your computer? Default Windows search sucks? Well, why don't you try out [Everything](#), the best free Windows file search tool.

82. Wish your clipboard could store more than one item at a time? Well you should check out ClipX, ArsClip and Ditto clipboard, three cool [clipboard manager programs](#).

83. [Dropl](#) is a nifty little Windows program that lets you “drop” files onto a folder, which will then process the file according to your settings.

84. Remote desktop is great for Windows computers, but for other platforms you’ll need something like [TightVNC](#) or [UltraVNC](#).

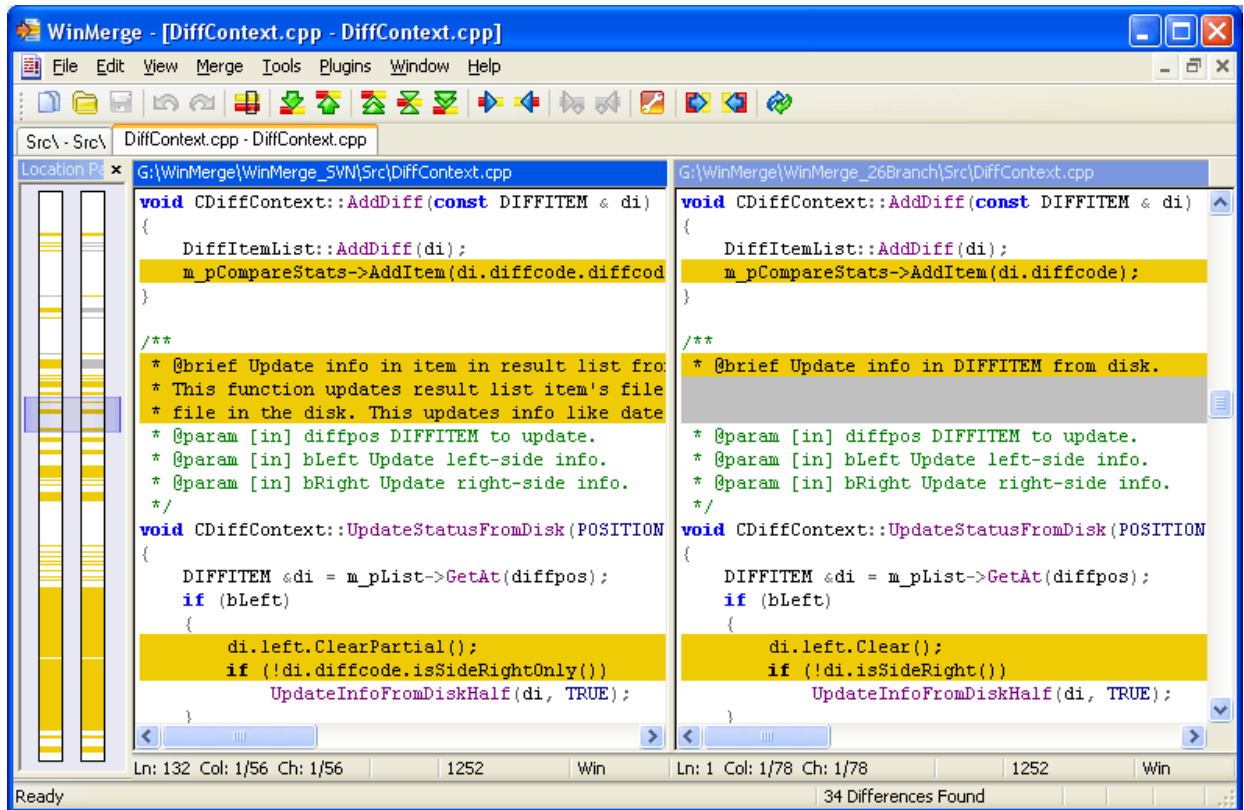

85. Got a spare computer with some extra storage on it? You can turn it into a NAS device using a program called [FreeNAS](#).

86. Since we’re talking about only Windows freeware programs, you might be interested in [Disk2VHD](#), a program from Microsoft that will let you convert your current PC into a virtual machine that you can then load into Hyper-V.

87. Want to learn a new language? The best program for Windows in my view is [Duolingo](#).

88. Ever had to split a large file into a couple of pieces? If so, check out [GSplit](#), a nifty utility for splitting and re-joining files.

89. Been in a situation where you needed to compare two files and see the differences? [WinMerge](#) is a cool program that will let you compare and merge two files. It hasn’t been updated since 2013, but a new version should be coming this year.

90. Need to send ultra-private and secure messages from Windows? Your best option is [Telegram Messenger](#).

91. Or what about merging multiple PDF files together? If so, check out [PDFtk](#), a toolkit that lets you merge, split, and repair PDF files.

92. For the network geeks out there, you have to try [Spiceworks](#) at home to really monitor what's happening on the network. For the really tech-savvy folks, get [Wireshark](#).

93. Want to print something at your parents' house from your house halfway across the country? Check out [PrinterShare](#).

94. Worried that the data you have saved in the Cloud with Google, Microsoft, etc. can be hacked? Encrypt it all with [Boxcryptor](#).

95. Ever needed to figure out the RGB value or hexadecimal value of a color that is on your computer screen? [ColorPic](#) is a nice utility that lets you determine the hexadecimal RGB color for anything on your screen.

96. If you have a lot of MP3 files, you probably need to edit the tags and metadata so that everything shows up properly in iTunes or your music manager app. You can use [MP3tag](#) or [TagScanner](#) to edit MP3 tags.

97. If you have more than one monitor, you can use a program like [Dual Monitor Tools](#) to customize each monitor to your liking.

98. Wish you could use Find My iPhone with all your other non-Apple devices? [Prey](#) might just be the answer.

99. One of the best ways to keep your computer secure is to make sure all the software is updated. [SUMO](#) does this for you. Other good options are [FileHippo App Manager](#) and [Personal Software Inspector](#).
