Why Do I Need A VPN?

A VPN (virtual private network) is a service that encrypts your internet traffic and protects your online identity.

Many internet users are choosing VPN services to protect their online privacy and general security. Using a VPN secures your internet connection on public Wi-Fi to help protect your private data. With a VPN enabled, all the data you send and receive travels through a strong encrypted tunnel so no one can get their hands on your private information or files.

Public Wi-Fi networks at an airport or a coffee shop are not private. Do you know who might be keeping tabs on the network traffic? Can you even be sure the hotspot is legitimate? Someone hunting for private personal data could actually have set it up. Think about your passwords, banking details, credit card numbers, and any other private details you send every time you go online.

Another advantage about using a VPN is that you can access the internet from wherever you are. A VPN allows you to connect to hundreds of remote servers in different locations, which allows you to bypass censorship.

Why NordVPN?

When you connect to the internet through your browser, all of the internet traffic passes through your ISP's servers, where logs are saved that reference everything you did while online. This puts your privacy at risk, as your ISP may provide your browsing history to advertisers, government agencies, and other third parties. NordVPN has 5,746 servers worldwide.

NordVPN redirects your internet traffic through a specially configured remote server that hides your IP address/location and encrypts all the data you send or receive. The encrypted data is impossible to read. Like an armored van, it takes you from point A to point B in total secret, shielding you from any dangers that lurk outside.

NordVPN Benefits

No-Log Policy

NordVPN puts your privacy first, keeping zero logs of our users' online activity and requiring no company details at the point of purchase.

Military-Grade Encryption

NordVPN applies strong encryption to all your internet traffic so that no third parties can access your confidential information.

24/7 Support

Their top-rated support department is there to help you any time you need them.

Easy To Use

NordVPN offers easy-to-use apps for all major platforms: Windows, macOS, Android and iOS. Users can download and start using them within minutes.

May Be Used On 6 Concurrent Devices

Users can secure up to 6 concurrent devices with a single NordVPN account. NordVPN can protect your computers, smartphones, routers and more.

30-Day Money Back Guarantee

NordVPN provides a 30-day money back guarantee.

VPN Applicability For Real Estate Appraisers

As real estate appraisers, many of us use our mobile devices outside of the office, and as we are responsible for protecting the confidential information from our assignment, inspection, research and conclusions, it would be prudent to use of a VPN to keep our clients' private information confidential. I am not an attorney, so I would suggest that you discuss these liability issues with an attorney.

Pricing

NordVPN pricing is very competitive; \$2.99 per month for a three-year plan, \$3.99 per month for a two-year plan, and \$6.99/month for a one-year plan. One-month plans are \$11.95 per month.

Industry Awards

NordVPN was the Editor's Choice for 2019, and Best of the Year for 2018 for PC Magazine. NordVPN also earned the prize for the 2019 Best Overall Service at the BestVPN.com Awards.

Conclusion

Given the industry awards, NordVPN rates the highest in overall quality in comparison with other similar VPN services. The price, ease of installation, performance, and location is why so many users choose NordVPN.
