

Windows 7 Support Ending Soon

Providing high quality software and service for our customers is our top priority. Changes in requirements are sometimes necessary. For software improvements and ongoing security it is important to maintain a current operating system.

After 10 years, Microsoft ended their support for Windows 7 in January 2020. Since November of last year, we have been highly recommending all current Windows 7 users to upgrade as soon as possible. **It is important to note that new updates to Appraise-It and Appraise-It Pro will not work after May 1, 2021 in Windows 7.**

IT IS IMPORTANT TO UPGRADE AS SOON AS POSSIBLE

Security and reliability

Windows 7 is no longer supported by Microsoft. Since Microsoft is no longer releasing security updates, Windows 7 is susceptible to security vulnerabilities. These issues can adversely affect the stability and functionality of our software. For additional information go to Microsoft's [website](#).

Newer version advantages

Ending support for older Window versions helps us improve our software by taking advantage of the improvements that are only available in newer Windows versions.
